ANTIGENA EMAIL

Antigena Email will contain the threat either by locking malicious links or flattening attachments, or even preventing an incoming email from reaching the inbox entirely. All email tools will require a holistic view of the entire environment, not just email data, to identify increasingly sophisticated email threats in the years to come.

Antigena Email is the first and only solution that does this.

Visibility, Forensics, & Auditing

Antigena has far superior functionality around email visibility, forensics, and auditing. This includes the ability in the interface to see which users have clicked on links in an email, whether or not a message has been read, who else has received certain emails, who users normally communicate with, breakdowns of email headers, and more. Antigena also allows security teams to remove live emails from inboxes if needed, which is not possible with many other tools.

Incognito Email Defense

Email gateways also require organizations to change their 'MX record', which means that any attacker can immediately see which tools are being used and can craft their attacks accordingly. Antigena Email does not sit in line, so attackers have less intel on your security stack and will be less likely to target your organization

Auto-Prioritization of Key Individuals

Antigena Email understands who your users are, which means it can automatically detect which users are high priority, which users are more likely to be targeted, and which users have access to sensitive material. It will therefore take an appropriate response to different users, rather than a single response across the board.

Learning from Patient Zero

Antigena Email can uniquely detect an infection in the network (Patient Zero), and automatically perform root cause analysis to see if it originated via email. If so, it will instantly protect the business by stopping all other emails that are part of the same camp.

Antigena Email will not only stop less advanced, **'known'** threats that legacy defenses would, but it is also best-in-class at stopping the sophisticated threats that evade legacy defenses by design such as**:**

- Spear phishing

- Social engineering & impersonation

- Business Email Compromise

- Supply chain account takeover

- External data loss

Get Started:

TBAS is offering a complimentary 30-day 'Proof of Value', allowing you to discover the power of AI in your own environment.

Upon installation, Antigena Email will immediately begin learning the 'pattern of life' of every email user across your organization. Our AI self-learns by passively analyzing real-time data, without using historical attack training data, rules or signatures.
